Open Windows Explorer.

Click on the Tools menu and choose Folder Options.

When the Folder Options dialog box appears, choose the File Types tab.

All the file types on your computer will be displayed.

Scroll down and select FNI as the Extension, the File Types should say FileNET IDM Document. With FNI selected, click Advanced.

The Edit File Type dialog box will appear, with the Action Open highlighted, Un-check the box by Confirm open after download. Be sure Browse in same window is checked. This will enable you to view documents without having to click open for each image. Click OK.
